

Bîtca Nichita

Date of birth: 21/08/2003 | **Place of birth:** Chisinau, Moldova |

Nationality: Moldovan | **Gender:** Male | **Phone number:** (+373) 78117102 (Work) |

Email address: toxicblade.work@gmail.com | **Website:** <https://github.com/ToxicBlades> |

Address: florilor 12/3, ap 88, s6, MD-2020, Chişinău, Moldova (Home)

● ABOUT ME

Backend & automation engineer focused on building scalable internal systems, workflow automation, and operational tooling in fast-moving startup environments. Experienced in backend development, asynchronous architectures, infrastructure tooling, and process automation using Node.js, TypeScript, PostgreSQL, RabbitMQ, Docker, and cloud platforms. Comfortable taking ownership across the full delivery lifecycle — from backend implementation and infrastructure configuration to deployment, monitoring, and operational support in rapidly evolving environments.

● SKILLS

Backend & APIs

NodeJs (ExpressJs) | TypeScript | REST APIS' | RabbitMQ

Frontend

React | React Native | Next.js

Infrastructure & DevOps

Docker / Docker Compose | Linux Servers | Git / GitHub Actions | Terraform | AWS (EC2, SNS, SES)

Databases & Automation

n8n Automation | PostgreSQL / SQL

Edit Product & Workflow

AI-assisted operations | Stakeholder communication | Sprint coordination | Workflow optimization | Technical documentation | Cross-functional collaboration | Agile workflows

● WORK EXPERIENCE

SOFTWARE ENGINEER (BACKEND & AUTOMATION) - NOWTEC SOLUTIONS M - 08/02/2024 - 27/02/2026 - CHISINAU, MOLDOVA

Worked across product development, infrastructure, automation, and operational tooling in a rapidly evolving environment. Took ownership of systems that directly supported company scaling, client onboarding, and internal efficiency.
Key Contributions:

- Led migration of a production CRM platform from Next.js 13 to Next.js 16
- Designed and implemented RabbitMQ-based asynchronous email delivery architecture processing 1000+ emails/day
- Built automated client provisioning workflows reducing onboarding time by 20%
- Developed Node.js microservices handling 10 automated operational tasks daily
- Managed CI/CD pipelines and infrastructure-as-code workflows across production environments using Terraform and GitHub Actions
- Coordinated cloud migration from AWS to Infomaniak with zero production downtime

- Developed n8n-based workflow automation systems reducing repetitive operational workload by 20 hours/week
- Worked directly with 3 clients and internal team to gather requirements and deliver operational tooling improvements
- Improved internal operational efficiency by automating repetitive support and onboarding processes

TECHNICAL OPERATIONS & DELIVERY COORDINATION (PART-TIME ALONGSIDE PRIMARY ENGINEERING ROLE) – SANDROLOGIC GROUP – 05/06/2025 – Current – CHISINAU, MOLDOVA

Website: <https://sandrologic.md/>

Supported technical delivery and infrastructure-related operations across energy-sector integration projects involving APIs, deployment coordination, and operational tooling.

Key Contributions:

- Assisted with integration planning and technical coordination for OperatorFabric module customization
- Maintained API integration documentation and deployment tracking across cross-functional engineering teams
- Supported SLA monitoring workflows and infrastructure incident escalation processes
- Assisted in ISO compliance preparation and operational documentation workflows
- Tracked deployment schedules and infrastructure-related dependencies between DevOps and client teams
- Supported backlog management and technical task coordination for VPP sandbox initiative components
- Worked closely with backend and infrastructure teams to align operational requirements with technical implementation

AUTOMATION ENGINEER – SMART ENERGY SOLUTIONS – 01/05/2023 – 01/02/2024 – CHISINAU, MOLDOVA

Developed internal automation and AI-assisted operational tools focused on improving organizational efficiency and reducing manual work.

Key Contributions:

- Built GPT-4-powered email parsing system in Python automating workflows previously requiring 160 employee hours/month
- Developed full-stack operational data platform using Next.js, Node.js, TypeScript, and PostgreSQL serving 20 internal users
- Created internal Telegram bot ecosystem reducing repetitive employee workflows by at least 2 hours/day
- Integrated n8n automation into operational and document-generation pipelines processing 500 automated tasks/month
- Helped introduce GPT-4 tooling into company workflows and trained employees on practical AI-assisted operations
- Rapidly prototyped automation solutions for operational bottlenecks across multiple internal departments

● **EDUCATION AND TRAINING**

01/09/2022 – 31/08/2025 Chişinău, Moldova

HIGHER EDUCATION - COMPUTER SCIENCE Universitatea Tehnica a Moldovei

Address Strada Studenţilor 7, 2048, Chişinău, Moldova | **Website** <https://utm.md/ru/>

01/09/2009 – 31/05/2022 Chişinău, Moldova

SECONDARY SCHOOL Liceul Nicolae Miclescu Spătaru

Address Florilor 14/3, MD-2000, Chişinău, Moldova | **Website** <http://nm spat aru.com/ru/>

● **LANGUAGE SKILLS**

Mother tongue(s): **RUSSIAN**
Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ROMANIAN	B2	B2	B1	B1	B1
ENGLISH	B2	B2	B2	B2	B1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

● **PROJECTS**

Self-Hosted Linux Home Server

- Personal Infrastructure Project
- Repurposed an old PC into a Linux-based self-hosted home server environment
 - Configured containerized services using Docker and reverse proxy routing with Caddy
 - Exposed self-hosted applications securely to the internet using free domain and HTTPS configurations
 - Deployed and maintained internal family-oriented applications for budget tracking and household management
 - Managed Linux system administration, networking configuration, service monitoring, and backup workflows
 - Experimented with self-hosted infrastructure, automation, and lightweight DevOps practices in a home-lab environment

20/03/2026 – CURRENT

Mobile Home Organizer Application (In Progress)

- Personal Product & Backend Development Project
- Designing and developing a mobile-first household organization platform focused on simplifying everyday my family workflow
 - Building backend infrastructure and API architecture for shared task management, reminders, and household coordination
 - Working on scalable application structure, authentication flows, and cross-device synchronization
 - Focusing on practical UX, automation, and real-world usability for non-technical users
 - Using the project as a platform to deepen experience in backend engineering, mobile-oriented architecture, and product development workflows

● **CREATIVE WORKS**

24/11/2023 – 26/11/2023
Hackathon Winner

- Led a team during a machine learning hackathon focused on predicting family violence risks.
- Achievements
- Led and organized a team with no prior ML experience
 - Developed predictive ML model in Python achieving 78% validation accuracy
 - Built accompanying web platform for data visualization and reporting
 - Delivered one of the strongest technical presentations of the competition
 - Outperformed teams with significantly more academic experience

● **HOBBIES AND INTERESTS**

Sport,gaming,hardware

Strong interest in low-level systems, hardware, and self-hosted infrastructure. Enjoy building Linux-based home server environments, automation tooling, and hands-on hardware projects using Arduino and embedded systems.

Outside of technology, enjoy jogging, football, pool, and competitive strategy games.
